

Grape Study

Canary Islands, Tenerife, Spain

AZOMITE® was placed on one half of a vineyard that was to be cut down and replanted because the previous years' plants had low flower yields. AZOMITE® was applied to both the soil and sprayed on the leaves and vines.

White fungus "Oidio" appeared on the control vines but not on the vines using AZOMITE®. Preliminary results indicate AZOMITE® eliminates the white fungus "Oidio" from leaves. Vines grown with AZOMITE® are larger, produced more flowers, larger grapes and more vital leaves.

Grape vines with AZOMITE®
are strong and fungus-free

White fungus "Oidio" appeared on
the control vines. (No AZOMITE®)
